SECRET/CONTROL - U.S. OFFICIAIS CNIY

CENTRAL INTELLIGENCE AGENCY

-2-

- 7. The Neptunwerst at Rostock began to build submarine hulls some time in May or early June 1950. Two types of hulls are being built, 1500 and 2500 tons, and the yard is scheduled to produce two of each type per month. An area on the west side of the shipyard has been alloted to this work, and the necessary machinery has been, or is being, installed in a building which was already available. It is intended that the submarine hull building program should not interfere in any way with the current construction of lugger type fishing boats, or with the repair work done by the yard. Technicians employed in the yard do not believe that it will be possible to carry out the scheduled production of these submarine hulls at present. Since certain machines are not avaiable, and since there is a lack of qualified technicians there are many improvisations.
- 8. These same technicians describe the submarines under construction as being an improved and modified form of the German Walther submarine. It is said that German specialists, having experience with the Walther submarine, have arrived at Warneminde to supervise the final assembly which is to take place at the Karl Liebknecht yard there. However, no confirmation of this could be obtained in Warneminde.

50X1-HUM

- 9. Soviet officers stationed in Wismar have said that the naval force there was to be increased in July. Half a flotilla of torpedo boats, a flotilla of fast launches, and a flotilla of patrol launches with auxiliary craft were to be transferred. This additional force is to be permanently stationed in Wismar and is under the command of a "Sperrkommando" located on shore.
- 10. With the exception of recognized fishing areas, the following areas have been placed out of bounds to fishing vessels by the Soviet authorities:
  - a. The entire area within the 12-mile zone from the north point of Poel Island to der Bug on Rigen Island.
  - b. The east coast of Usedom Island between Swinemunde and the Peenemunder Haken within the 12-mile zone.
  - c. The south coast of Usedom.
- 11. In addition to restricting the above areas, fishing vessels are liable to be stopped on the high seas by Soviet patrol boats without prior warning, presumably when maneuvers are taking place in the area.
